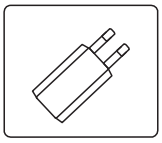
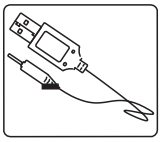
1 x USB recharge cable
1 x USB AC charger



Power Adaptor



Recharge Cable

Overview

Quick Start

1 Pair with mobile phone

A. Put Bluetooth Neckloop in pairing mode

1) With the Bluetooth neckloop powered off, press and hold Bluetooth switch for 6-10 seconds until indicator turn flashHV between blue and red.
2) If Bluetooth is switched on or indicator is flashing, press and hold Bluetooth switch for 5 seconds to turn off Bluetooth, then repeat above step 1).

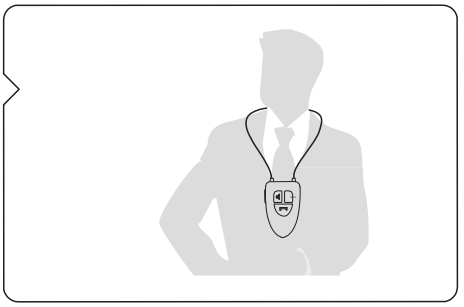
B. Put mobile phone in pairing mode

1) Go to mobile phone panel, turn on Bluetooth function and search for new Bluetooth device.
2) Select “T-Loop” then press “OK” or “YES”.
3) Enter password “0000" and press “OK”.
* once paired, indicator will change from flashing to blue.

Note: 1) Bluetooth indicator is nearby “SOS button”.
2) If you can not switch on Bluetooth, please recharge for 3 hours and try again (refer to “Recharge and Battery”).

2 Wear the neckloop

Hang the neckloop around the neck as shown in image to the right.



3 Test and use neckloop

Once connected to mobile phone you should be able to hear any audio within your earpiece (Please check how to use earpiece in manual of earpiece.) The volume can be adjusted via the volume control on the neckloop

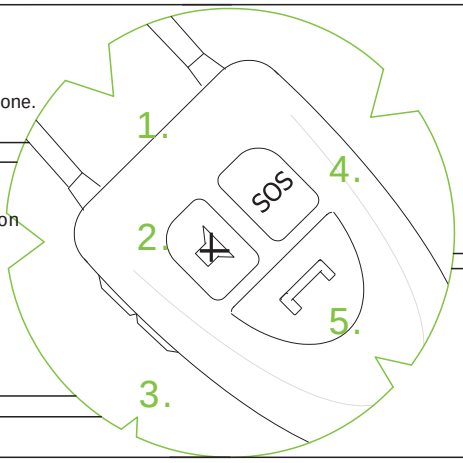
The Bluetooth neckloop has a number of buttons all providing different functions. See below for detailed descriptions:

1. 38db microphone ensures you partner can hear you clearly even when whispering into the microphone.

2. Exclusive design – Mute Button
The creative function is to avoid earpiece detection

Simply push mute button it will cut off audio Output. Earpiece detection equipment will be unable to detect the neckloop and therefore cannot monitor conversation

3. Change volume to get clear sounds.



4. Exclusive design – SOS Button
Contact your partner without saying a word

Simply push SOS button, to transmit a beep. Ideal for transmitting morse code
The beep noise is also audible in your Earpiece.

5. Bluetooth switch - multiple function switch to turn on/off power, reject/answer/make a phone call etc.

4 Power, Battery and recharge

To save battery power, please turn off Bluetooth power if not using for a long time

Turn off – Press and hold Bluetooth switch until indicator flashes then switches off
Turn on — Press and hold Bluetooth switch until indicator changes to a solid blue colour. If already paired with mobile phone and Bluetooth function in mobile phone is on, it will connect to mobile phone automatically.
** Some mobile phone models do not support this function.*

The neckloop has a built-in 320mah lithium rechargeable battery. The full performance a new battery is achieved only after two or three complete charge and discharge cycles. The battery can be charged and discharge hundreds of times, but it will eventually wear out.

When recharging use only original default USB recharge cable and default wall charger. Do not leave a fully charged device on recharge power source. Overcharging may shorten battery life. If left unused, a fully charged battery will lose its charge over time.

We supply US/EU/UK standard plugs for the wall charger. Please choose the correct plug while place the order.

Solid red (Plugged into Adaptor)	Battery charging
No indicator with adaptor plugged in	Charging Completed
No indicator without adaptor plugged in	Power use off
Flashing blue and red	In pairing mode
10 rapid flashes In Blue	Pairing Successful
Slow pulse in Blue	Connected

Troubleshooting

Q. Why isn't the neckloop working with my phone?
A. Please make sure that Bluetooth is switched on in your mobile phone and that the neckloop is in pairing mode. Try powering on/off the phone and neckloop and try again.

Q. Why do the answer SOS and mute buttons not function?
A. Both SOS and mute functions only work whilst phone conversation is in progress. If you are playing music or mobile phone is not in phone conversation, these 2 functions are not applicable.

Q. How to recharge battery?
A. Please read "Power, Battery and Recharge" step #4 for detailed instructions. When you have successfully connected the neckloop to a power source the indicator will change to red

Q. Why do I hear interference in invisible earpiece?
A. If earpiece has no quality problem, the volume is likely too loud. Reduce the volume on the volume controller
